EXPERIENCE & PROJECTS

Company: Group 107

Jun 2021 - Present

PROJECT: VIBODJ - (3 YEARS 2 MONTHS)
POSITION: GENERAL QA ENGINEER

ViboDJ is a multi-platform music and event planning tool designed for professional DJs. Available on web and mobile, it helps DJs to create and manage events, build playlists, and collaborate with clients. The platform integrates with Spotify, Apple Music, Beatsource, internal Scanner for music organization, Stripe for secure payments, and Intercom for customer support. Over 450,000 events have been created using ViboDJ.

Technologies: Python, Pytest, Playwright, MongoDB, Allure, Qase, Jira, Proxyman, Intercom, Stripe, Zapier, N8N

- Small development team (up to 10 people). 2 QA engineers (Manual & General QA Engineer).
- **Built API automation framework from scratch using Python and Pytest (1300+ tests, 95% coverage) with parallel execution. Set up CI/CD pipeline.**
- **Built Web automation framework from scratch using Playwright and Pytest (100+ tests) with parallel execution.**
- **Cross-platform testing (Web, Android, iOS, Backend). Providing support for multiple backend versions.**
- **MongoDB testing, data validation, and migration testing. Validated data in the database.**
- Testing integration with Stripe, Intercom, and AI tools (Zapier, N8N). Worked with customer success team.
- Improved QA processes and workflow optimization.
- Created test documentation (Test checklists, Test Designs, Reports).
- Smoke testing, regression testing, etc.
- Worked with customer success team. Provided support for customers even on Zoom calls.
- Strong knowledge of API and Web testing. Issue investigation and resolution.

Project: COOKZ (8 months)
Position: Junior Pro General QA Engineer

COOKZ is a mobile social app for food lovers — like TikTok, but dedicated to cooking. Users share short recipe videos, explore new dishes, and connect with fellow food enthusiasts.

Technologies: Python, Pytest, SQL, Qase, Jira, Intercom, Locust

- **Worked as the sole QA on a project with a development team of up to 6 members.**
- **Initiated and built an API automation framework from scratch using Python and Pytest.**
- **Cross-platform testing (Web – Admin panel, Android, iOS, Backend).**
- Database testing, data validation. Validated data in the database.
- Created test documentation (Test checklists, Test Designs, Reports).
- Smoke testing, regression testing, etc.
- Worked on two projects simultaneously.
- Was involved from the very beginning of the project.
- Actively participated in project planning and requirements definition.

Project: Ofcourse-market (8 months)
Position: Junior Pro Manual QA Engineer

Company that focuses on providing content and experiences for corporate events, especially team-building and holiday parties

- **Worked on two projects simultaneously.**
- **Worked as the sole QA on a project with a development team with 4 members.**
- **Initiated and built an API automation framework from scratch using Python and Pytest.**
- Cross-platform testing (Web, Android, iOS).
- Created test documentation (Test checklists, Test Designs, Reports).
- Smoke testing, regression testing, etc.
- Was involved from the very beginning of the project.
- Actively participated in project planning and requirements definition.

Projects: WordPress-based websites (7 months)
Position: Junior QA Engineer (WordPress Team)

Project focused on developing and maintaining multiple WordPress-based websites with custom plugins, themes, and integrations for various clients.

- Performed functional and UI testing of WordPress websites and plugins.
- Worked closely with developers, designers, and content managers to ensure high product quality.
- Tested website performance, responsiveness, and compatibility across different browsers and devices.
- Executed regression and smoke testing after deployments and plugin updates.
- Collaborated on improving QA processes and test coverage for WordPress-based projects.
- Created a website testing system and checklist that are still actively used by the team.

EDUCATION

- **Economics —** Bachelor's Degree in Economics, focused on taxation, finance, and management.
- **Business Analytics —** Degree in Business Analytics, specialized in data analysis, business decision-making, and digital transformation.

EDUCATION

I'm constantly learning and expanding my skills. I'm passionate about projects that combine AI and automation testing, where I can apply my knowledge to build intelligent and efficient solutions. I actively study business literature and recently started preparing for the ISTQB Testing AI certification. I've completed several Python courses for developers, Python QA Automation programs, and a Python LangChain course for AI development.
